PUBLIC WORKS

Road Maintenance

Each year, we develop an annual work plan, which includes bringing the roads to MTO standards, upgrading, and maintaining infrastructure. Summer maintenance includes grading, patching, roadside ditching, brushing, tree removal, dust control and upgrades. Winter maintenance includes routine and scheduled snow removal and sanding. Senior Snowplowing services are also available to eligible seniors.

Waste & Recycling

Garbage Collection: Mondays for all areas with the exception of holidays, then pick-up will occur a day later.

Recycling Collection: Each household is provided with two blue bins, one for CONTAINERS and one for FIBERS. Bi-Weekly curb side collection in addition to garbage day. Please place your blue bins by the curb side so they get picked up. Annual garbage/recycling calendars available upon request or at nfn.ca.

Replacement bins available at cost

Goods Exchange Day/Clean-up week

Goods Exchange Day usually takes place the first week of May. Spring Clean-up week is an annual event that occurs the second week in May. Notices and information will be posted in the newsletter. Call us if you're not sure what's acceptable to leave at the road side.

Garbage Toter Carts

48 and 96 gallon Toter Carts are available for purchase.

Water Treatment

Nipissing First Nation Water Operators conduct regular testing, maintenance and upgrading of all NFN water systems. Our operators continue to receive training to ensure that our systems meet government standards.

Notice: Waterline installations require a 2 week notice to arrange for a written estimate and to ensure that the installation can be scheduled at the earliest convenience.

Street Lights & Signage

Public Works and maintenance continue to install new LED Energy Savings street lights in all communities. Public works maintains a list of street lights that need repairs or replacements. Please report any problems to the Public Works department.

Public Works installs all community signage. We incorporate the anishnaabe language in signage to ensure Nipissing First Nations values, world views and understanding of the land is displayed.

Yellek Dock

The Yellek community boat launch and floating dock are installed each spring and removed each fall.

911

911 Signs

All NFN homeowners are required to purchase a 911 sign, so emergency vehicles are able to locate the residence if needed.

The Lands Department can confirm your 911 address.

Public Works installs all signs. It is important that the sign is in clear view with no landscaping or items to obstruct it.

Signs can be purchased at our finance desk for \$83.48

Culvert Work

The Public Works department maintains culverts that provide drainage for roadways. We also install culverts to individual driveways at the cost of the homeowner. Contact us to get a written estimate.

Homeowners may choose to install their own culverts, but must follow NFN culverts installation policy available at nfn.ca.

Permits

NFN Residents are required to obtain sand, gravel and dumping permits in relation to:

Yellek Railbed Dumping, Sand, and sandpits at Mooze Miiikan, and Riding Stable Road. Permits are issued once the individual has provided the proper information to Public Works and met the requirements necessary.

Permits such as site prep, tree and brush removal, along with sand and gravel removal will be inspected by the Public Works Department to ensure the work is done properly and up to standards. Permits are required by law and will result in a fine if not approved. A permit helps the property value of your land and ensures the safety of you and the public.
