RE: Bineshii Business Park Project

Since every project is different, every safety plan will be different. For this site we will be doing as follows;

- Prior to blasting operations starting neighbours will be notified.**
- Seismographs will be placed at several locations to monitor vibrations.**
- Blasting mats will be used to control all blasts.**
- Signs will be posted where necessary to notify of blasting operations.**
- Proper PPE will be worn by all.**
- For each blast, the immediate blast area or “danger zone” will be cleared by the blaster. This is not a set distance; it is determined by the blaster for each blast.**
- We will use a horn for each blast, 3 horn blasts, blast, then 1 horn blast after to signal all clear.**
- Only authorized personnel will be allowed in blast areas.**
- All local, provincial, and federal rules and regulations with regards to blasting and explosives will be followed.**

Thanks

Mike Cote
